Mid-project Check-in

Army ARL Path Analysis

Today's agenda

1 Review scope & goals

2 Align on common definitions

3 Clarify key stakeholder needs

4 Refine process workflow

5 Focus remaining research

1/ Review scope & goals

18F

Problem statement

Army Research Lab needs to be able to **efficiently and transparently** share open source software **within legal requirements**, but the current approach feels top-heavy.

Project outcomes

1

Independent evaluation of ARL's current open source policies and practices

2

Generate a set of open source software **standards and recommendations**

3

Create a **roadmap** of opportunities and recommendations on how to take action

How will we know if we're successful?

1

Our recommendations and roadmap will **be implementable** at ARL

2

Reflect a **diverse set of viewpoints**

3

Resonate as **useful to others** in the federal government that want to open source software

2/ Align on common definitions

18F

What defines "open source?"

What defines "open source collaboration?"

3/ Clarify key stakeholder needs

18F

System of ARL OSS stakeholders

What should the system know about:

Your group's role?
Needs to accomplish your group's mission?

4/ Refine process workflow

ARL OSS Process Workflow

Take 10 minutes.

Agree, disagree, have comments? Write each idea on a sticky and add to the process map.

Confused or unclear? Write a "?" on a sticky.

5/ Focus remaining research

18F

ARL OSS Key Questions

Thanks!
